

SD WAN MANAGED SERVICES

# Increase Scalability & Reliability for Network Efficiency

## MASS SD WAN services can provide:

- Ability to manage multiple types of connections – from MPLS to broadband to LTE
- Ease of implementation and centralized manageability
- Policy based application deployment – data can be transported by most logical option
- SD-WAN can address your data security concerns and dependable interoffice connectivity will ensure your communications environment delivers each and every time.

## Let MASS Design Your SD WAN Roadmap

**SD WAN** (Software Defined Wide Area Networking) is changing the face of networking. As a device and software driven solution, SD WAN allows you to connect multiple data connections (public and/or private) for one ubiquitous diverse network strategy. It's a key pathway for integrated cloud environments, data center optimization and virtualization.

MASS can help you create efficiencies in your network with SD WAN. From Proof of Concept to seamless migration and deployment, you can count on MASS Communications to design, implement and support your SD WAN strategy.
