

SECURITY MANAGED SERVICES

MASS Helps Secure Your Network in an Insecure World

HOW SECURE IS YOUR NETWORK?

Is your organization's network secure from intrusion and penetration 24/7/365?

Does your organization maintain data integrity and comply with government and industry regulations?

To what extent would a network security breach impact your business, our customers and our data?

The health of your business depends on the security of your network. Even the smallest cyber attack can spell disaster – from personal identifiable information (PII) stolen to proprietary secrets pirated. Achieving reliable information security is where MASS Communications comes in.

Our expert security engineers stay abreast of the latest threats, trends, exploits and other attack methods in order to identify risks and mitigate their exposure. Our in-depth internal and external network and information security vulnerability assessment and penetration testing, 24/7/365 managed security services and vendor neutral approach achieve a level of protection you won't find anywhere else.

MASS Security Managed Services can help your organization:

- Ensure up-time and prevent revenue loss
- Safeguard communication to protect transactions with partners, suppliers and customers
- Facilitate government and industry compliance with standards such as PCI DSS, SOX, HIPAA, FISMA, FFIEC, GLBA and others
- Reduce IT security staffing and training requirements, along with technical support and upgrades
- Decrease future hardware and software purchases, lowering capital expenditures
- Free internal IT resources to focus on core business functions
